Electricity Consumption Calculator

Calculate power, energy usage, and total electricity charge up to 24 hours.

Formulas Used

- $\text{Power (W)} = \text{Voltage (V)} \times \text{Current (A)}$
- $\text{Energy per Hour (kWh)} = \text{Power (W)} / 1000$
- $\text{Energy per Day (kWh)} = \text{Energy per Hour} \times 24$
- $\text{Total Charge} = \text{Energy (kWh)} \times (\text{Current Rate} / 100)$

Voltage (V)

240

Current (A)

2.0

Current Rate (sen/kWh)

21.80

Calculate

Reset

POWER : 0.48KW

RATE : 0.218RM

#	Hour	Energy (kWh)	Total (RM)
1	1	0.48	0.1
2	2	0.96	0.21
3	3	1.44	0.31
4	4	1.92	0.42
